Tired of not having your applications up-to-date or wasting your time to do so?

The AppUpdate is a unique service, where we take care of the tedious job of maintaining the most commonly used applications for you.

Most companies use the same base applications. At Trans4mation we have identified more than 100 most commonly used applications, which are typically released in new versions - with security updates or service packs - several times a year. The list includes applications like Adobe Reader, Adobe Flash, iTunes, Google products, VLC and many more. Whether applications are a part of the company image, or deployed using a software distribution system such as Microsoft SCCM or Altiris, the daunting job of keeping them updated in a timely fashion is the same.

The AppUpdate service saves you time and money on maintaining commonly used applications. All packages are fully documented and ready to be deployed.

WHAT DOES APPUPDATE DO FOR YOU?

Feature

- ➔ Access to 100+ packages ready for deployment
- ➔ Updated package max. 3 days after vendor release
- ➔ Complete documentation and deployment guide

Benefit

- ➔ No need for doing packaging yourself - you save time and money
- ➔ Higher security – due to more frequently updated applications
- ➔ No guessing, when importing packages into your deployment solution
