

Application Manager

„YOUR APPLICATION PORTFOLIO MANAGEMENT SOLUTION“

Application Manager is a web portal for managing the complete lifecycle of all your applications. Application Manager organizes all software in a single location, including the original files, installation and packaged media information. With full SCCM 2007 and 2012 integration, Application Manager enables you to manage the ordering, discovery, user acceptance testing and documentation processes, right through to the successful distribution of the applications to your end users.

- Managed discovery & UAT phases
- Easy to use Definitive Software Library
- Application lifecycle management
- Issue management of problems & SLAs
- Automated distribution of applications

WHAT CAN APPLICATION MANAGER DO FOR YOU?

Feature

- ➔ Easy to use Definitive Software Library (DSL) in your own infrastructure
- ➔ Automated documentation of packages
- ➔ Better management of the discovery and UAT phases
- ➔ SCCM-integration – automated creation of packages, collections and task sequences
- ➔ Integrates to most popular repackaging solutions
- ➔ Exchange calendar integration for automated discovery and UAT scheduling
- ➔ Extensive reporting and logging with 20 built-in reports
- ➔ Issue management for tracking problems and SLAs

Benefit

- ➔ Secure and ready to use – easy knowledge transfer
- ➔ Maintain all of your application data in one single ecosystem
- ➔ Lower the cost and time spent per package
- ➔ Seamless and GUI-driven integration reduces the risk of manual errors
- ➔ Faster time from order to delivery plus added flexibility
- ➔ For medium to large packaging projects application owners and experts time can be scheduled from within Application Manager
- ➔ At all times you know who is responsible and requested/changed which setting
- ➔ You are in control of the complete packaging and deployment process of your applications/packages

NEW & DISCOVERY

The first phase in the application management process. Enter the package details, contact information like application owner, dependencies and schedule for the discovery of the application. Use AppDisco and AppDoc for application documentation – how to install and configure.

PACKAGING

Everything – media files, documentation and notes are collected in one place.

Send it to internal packagers or utilize Trans4mation's world class packaging factory and receive status and issues right inside Application Manager.

DEPLOYMENT

Receive the finished packages right inside Application Manager – complete with fully automated documentation through AppDoc.

USER ACCEPTANCE TEST

Schedule your application owner/expert for the important user acceptance test. Refine this phase with automatic deployment to SCCM 2007 or 2012 R2 and further minimize the time spent by recording the user acceptance test with AppDisco.

COMPLETE

When finished, deploy your packages directly from inside Application Manager to SCCM 2007 or 2012 R2. Use our extensive template based solution for correct and automated creation of collections, task sequences and AD-groups. The templates are fully configurable to your specific needs and setup.

TRANS4MATION – ...AND IT WORKS!

Lean back and relax, if you are looking for intelligent, performant IT solutions that should grow along with your requirements and enterprise. Thanks to the Trans4mation system house you have found a provider which is focused precisely on that and simultaneously offering a wide range of products and services.
