

CUSTOM MADE PACKAGES

„THE WORLD’S MOST EXPERIENCED PACKAGING FACTORY“

We have more than two decades experience of application packaging and we take pride in delivering the absolute highest quality of application packages.

It might sound easy, but developing highly customized application packages for automatic software distribution is not an easy task. It requires expertise and working with this discipline on a daily basis. That is what we do – it is our core business.

Our custom made application packaging service not only guarantees you fully personalized application packages, compliant with all your packaging standards, but also an easy and effective delivery process. It has to be easy to do business with each other – either use our web-based AppOrder portal or our premier solution for application portfolio management called Application Manager.

Get your application packages the way you need them done.

- Flat rate pricing – regardless of application complexity
- Extensive quality assurance program
- Your own Technical Project Manager
- Guaranteed SLAs & KPIs
- Fully customized application packages
- All packaging formats supported – including MacOS

SAVE IT STAFF TIME SPENT ON PACKAGING

REDUCE COSTS

ISO 20000 (ITIL) CERTIFIED DELIVERY MODEL

HIGHER PACKAGE QUALITY

WHAT DOES CUSTOM-MADE PACKAGING DO FOR YOU?

Feature

- Flat rate pricing – regardless of application complexity
- Attractive flat rate maintenance agreements
- Guaranteed SLAs and KPIs
- Fully documented packages
- Your own Technical Project Manager (TPM)
- Extensive quality assurance program applied
- 75+ packaging experts employed
- If everything is packaged by Trans4mation, we can offer very attractive maintenance programs for your application package portfolio
- Get your custom packages delivered within a maximum of 10 working days and as low as 3 working days – ready to be deployed
- No guessing – everything is fully documented, including command lines for install, uninstall and repair
- You are not just a number - your TPM knows you and your business

Benefit

- No administrative overhead for deciding if an application is easy, medium or complex to package – let Trans4mation take the risk
- Ensures not only quality for the delivered packages, but also compliance with your packaging standards – Trans4mation is ISO 9001
- Application packaging is what we do, that is our core business and gives you as the customer a guarantee of the highest expertise level in this area

CUSTOM MADE PACKAGING

Custom Made Packaging Service consists of 7 phases:

Those 7 phases not only ensure a timely delivery, but assure the highest quality, since QA and testing is an integrated part of Trans4mation's packaging process.

During the package request you as a customer upload the application media and your choice of installation and configuration information. A packager will be assigned to your request and the packaging request is checked for completeness and any issues get in cooperation with you resolved. The package is developed with our state-of-the-art tools – everything according to your instructions and your packaging standards. Last, but not least, the developed package is thoroughly tested in our internal systems – including import and deployment through SCCM – and if needed/wished for, with your corporate OS image. The documentation is created and delivered to you as a customer for the final UAT (User Acceptance Test).

Every customer using our custom-made packaging service has a Technical Project Manager (TPM) assigned and thus issues and Requests for changes (RFC) get resolved in the most efficient manner. We believe in direct communication being the most effective way of cooperating with each other and thus direct access to your TPM is ensured at all times.

WANT MORE?

Take a look at our Application Manager – the premier solution for application portfolio management including a structured process for application packaging, deployment to SCCM and fully automated tools for application discovery and user acceptance tests.
